

Edge Computing for Real-time Research Data Training Course

Professional Development Training Course Outline

Category	Research and Data Analysis	Duration	5 Days
Base Fee	\$1,500 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

In today’s data-driven research landscape, real-time data processing is no longer a luxury—it’s a necessity. Edge computing has emerged as a transformative technology, enabling the collection, processing, and analysis of data at the edge of networks, close to the source. This reduces latency, enhances data privacy, and minimizes bandwidth usage—making it an ideal solution for scientific research, healthcare diagnostics, environmental monitoring, and other data-intensive fields that demand real-time insights.

Edge Computing for Real-time Research Data Training Course equips professionals, researchers, and technical experts with the skills to design, implement, and manage edge computing systems for real-time research data analysis. Through a hands-on, case-based approach, learners will explore cutting-edge edge computing frameworks, IoT integration, AI-driven edge analytics, and cybersecurity protocols for decentralized environments. The course bridges the gap between theoretical knowledge and practical application, ensuring participants can build scalable, secure, and intelligent edge-based systems for research purposes.

Programme Curriculum

Edge Computing for Real-time Research Data Training Course

Introduction

In today’s data-driven research landscape, real-time data processing is no longer a luxury—it’s a necessity. Edge computing has emerged as a transformative technology, enabling the collection, processing, and analysis of data at the edge of networks, close to the source. This reduces latency, enhances data privacy, and minimizes bandwidth usage—making it an ideal solution for scientific research, healthcare diagnostics, environmental monitoring, and other data-intensive fields that demand real-time insights.

Edge Computing for Real-time Research Data Training Course equips professionals, researchers, and technical experts with the skills to design, implement, and manage edge computing systems for real-time research data analysis. Through a hands-on, case-based approach, learners will explore cutting-edge edge computing frameworks, IoT integration, AI-driven edge analytics, and cybersecurity protocols for decentralized environments. The course bridges the gap between theoretical knowledge and practical application, ensuring participants can build scalable, secure, and intelligent edge-based systems for research purposes.

Course Objectives

1. Understand the fundamentals of edge computing architecture and real-time data pipelines.
2. Analyze the differences between cloud, fog, and edge computing models.
3. Implement edge-based data preprocessing techniques for time-sensitive research.
4. Design AI-powered edge systems for scientific and academic research.
5. Integrate IoT sensors and devices with edge platforms.
6. Ensure low-latency communication and decision-making at the edge.
7. Apply containerization and microservices in edge environments.
8. Utilize edge-native machine learning frameworks for analytics.
9. Address data privacy and cybersecurity challenges in edge research systems.
10. Monitor and maintain edge nodes and distributed networks.
11. Evaluate the performance of real-time edge applications using key metrics.
12. Explore scalable architectures for large-scale research deployment.
13. Develop real-world solutions using open-source edge computing tools.

Target Audiences

1. Research scientists and academic researchers
2. Data scientists and data analysts
3. IT and network administrators
4. IoT engineers and developers
5. Cybersecurity professionals
6. Health and environmental researchers
7. AI/ML engineers focused on edge systems
8. Government and policy data analysts

Course Duration: 5 days

Course Modules

Module 1: Introduction to Edge Computing for Research

- Overview of edge computing vs traditional models
- Role of edge in real-time data workflows
- Key components and architecture
- Importance in research environments
- Edge computing trends and innovations
- **Case Study:** Edge implementation in wildlife monitoring projects

Module 2: IoT and Edge Integration

- Understanding IoT architecture
- Sensor configuration and edge communication
- Protocols (MQTT, CoAP, etc.) for edge connectivity
- Challenges in device-to-edge synchronization
- Edge gateways for seamless data flow

- **Case Study:** Smart agriculture using edge-IoT integration

Module 3: Edge AI and Real-time Analytics

- AI inference at the edge
- Tools: TensorFlow Lite, OpenVINO, Edge Impulse
- Designing real-time predictive models
- Applications in health and engineering research
- Performance tuning for low-power devices
- **Case Study:** Predictive analytics in patient monitoring systems

Module 4: Edge System Design and Architecture

- Choosing the right hardware and platforms
- Building fault-tolerant edge systems
- Edge vs cloud architectural decisions
- Energy-efficient designs for remote locations
- Scalability in decentralized networks
- **Case Study:** Environmental research using edge sensors in remote areas

Module 5: Cybersecurity in Edge Computing

- Threat models for edge networks
- Data encryption and secure communication
- Authentication and device management
- Regulatory compliance in research data
- Intrusion detection systems at the edge
- **Case Study:** Securing sensitive data in biomedical research

Module 6: Edge Deployment and Maintenance

- Deployment strategies (bare-metal, virtualized, containerized)
- CI/CD for edge devices
- Monitoring and diagnostics tools
- Edge failure recovery techniques
- Performance benchmarking
- **Case Study:** Industrial automation with real-time edge diagnostics

Module 7: Data Governance and Privacy

- Data residency and sovereignty issues
- Anonymization and data minimization techniques
- Ethical data use in field research
- Legal frameworks (GDPR, HIPAA, etc.)
- Privacy-preserving edge analytics
- **Case Study:** Privacy-compliant research in clinical trials

Module 8: Capstone Project and Future Trends

- Designing an edge-based research prototype
- Emerging technologies (5G, federated learning, quantum edge)
- Market trends and research funding opportunities
- Collaboration and data sharing at the edge
- Final project presentations
- **Case Study:** Cross-institutional academic research using edge frameworks

Training Methodology

- Interactive lectures with real-world examples
- Hands-on lab exercises and demos
- Group-based discussions and peer review
- Guided case study analysis per module
- Final project development and feedback
- Continuous assessment through quizzes and assignments

Register as a group from 3 participants for a Discount

Send us an email: info@fineskilltrainingcenter.org or call +254769199797

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- The participant must be conversant with English.
- Upon completion of training the participant will be issued with an Authorized Training Certificate
- Course duration is flexible and the contents can be modified to fit any number of days.
- The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- One-year post-training support Consultation and Coaching provided after the course.
- Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
21 Sep 2026	25 Sep 2026	Online	\$1,000
21 Sep 2026	25 Sep 2026	Physical	\$1,500
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0

Start Date	End Date	Location	Price
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
