

Engineering Ethics and Professional Practice Training Course

Professional Development Training Course Outline

Category	Construction Institute	Duration	5 Days
Base Fee	\$1,500 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

Engineering Ethics and Professional Practice Training Course is designed to develop responsible, innovative, and globally competent engineers equipped with the knowledge, skills, and ethical mindset required to address modern engineering challenges. In an era of Artificial Intelligence (AI), digital transformation, sustainable engineering, Industry 5.0, cybersecurity, climate resilience, and smart infrastructure, engineers must go beyond technical excellence and demonstrate professional integrity, ethical decision-making, leadership accountability, and social responsibility. This course strengthens participants' understanding of engineering codes of ethics, professional standards, risk management, regulatory compliance, sustainability principles, and emerging technologies, enabling them to make impactful decisions that protect public safety and advance societal progress.

The program integrates real-world engineering scenarios, global case studies, interactive discussions, ethical dilemma simulations, and professional practice frameworks to prepare engineers for complex workplace environments. Participants will explore engineering governance, safety culture, environmental responsibility, intellectual property, data ethics, workplace professionalism, and stakeholder management while developing the ability to balance innovation with ethical responsibility. Through this training, engineers and technical professionals gain the confidence to become trusted leaders, ethical innovators, and change agents in a rapidly evolving engineering ecosystem.

Programme Curriculum

Engineering Ethics and Professional Practice Training Course

Introduction

Engineering Ethics and Professional Practice Training Course is designed to develop responsible, innovative, and globally competent engineers equipped with the knowledge, skills, and ethical mindset required to address

modern engineering challenges. In an era of Artificial Intelligence (AI), digital transformation, sustainable engineering, Industry 5.0, cybersecurity, climate resilience, and smart infrastructure, engineers must go beyond technical excellence and demonstrate professional integrity, ethical decision-making, leadership accountability, and social responsibility. This course strengthens participants' understanding of engineering codes of ethics, professional standards, risk management, regulatory compliance, sustainability principles, and emerging technologies, enabling them to make impactful decisions that protect public safety and advance societal progress.

The program integrates real-world engineering scenarios, global case studies, interactive discussions, ethical dilemma simulations, and professional practice frameworks to prepare engineers for complex workplace environments. Participants will explore engineering governance, safety culture, environmental responsibility, intellectual property, data ethics, workplace professionalism, and stakeholder management while developing the ability to balance innovation with ethical responsibility. Through this training, engineers and technical professionals gain the confidence to become trusted leaders, ethical innovators, and change agents in a rapidly evolving engineering ecosystem.

Course Duration

5 days

Course Objectives

By the end of this training course, participants will be able to:

1. Understand global engineering ethics principles, professional codes, and industry standards.
2. Apply ethical decision-making frameworks to complex engineering challenges.
3. Develop strong awareness of public safety, risk management, and engineering accountability.
4. Strengthen professional integrity, leadership ethics, and workplace responsibility.
5. Implement sustainable engineering practices aligned with ESG (Environmental, Social, and Governance) goals.
6. Evaluate ethical implications of Artificial Intelligence, automation, and emerging technologies.
7. Promote diversity, inclusion, and ethical workplace cultures within engineering organizations.
8. Improve understanding of engineering laws, regulations, compliance, and governance frameworks.
9. Manage professional conflicts, stakeholder expectations, and ethical dilemmas effectively.
10. Apply cybersecurity, data privacy, and digital ethics principles in engineering projects.
11. Enhance engineering leadership capabilities and responsible innovation strategies.
12. Develop skills for global collaboration, professional communication, and ethical project management.
13. Build a mindset of continuous professional development and lifelong engineering excellence.

Target Audience

1. Professional Engineers and Engineering Consultants
2. Engineering Managers and Project Leaders
3. Graduate Engineers and Early-Career Professionals
4. Engineering Students and Academic Researchers
5. Technical Specialists and Design Professionals
6. Quality, Safety, and Compliance Officers
7. Infrastructure, Manufacturing, and Technology Professionals
8. Engineering Educators and Professional Trainers

Course Modules

Module 1: Fundamentals of Engineering Ethics and Professional Responsibility

- Understanding **engineering ethics principles and professional obligations**
- Role of engineers in protecting **public health, safety, and welfare**
- Overview of global engineering **codes of conduct and standards**
- Professional accountability and ethical leadership practices
- Building trust through engineering excellence
- **Case Study: Space Shuttle Challenger Disaster**

Module 2: Ethical Decision-Making Frameworks for Engineers

- Identifying ethical issues in engineering projects
- Applying structured **ethical reasoning models**
- Balancing technical, economic, environmental, and social considerations
- Managing conflicts of interest and professional dilemmas
- Developing ethical problem-solving capabilities
- **Case Study: Boeing 737 MAX Crisis**

Module 3: Engineering Safety, Risk Management, and Accountability

- Engineering responsibility for safety-critical systems
- Risk assessment and mitigation strategies
- Safety culture development
- Failure analysis and lessons learned
- Regulatory compliance and engineering accountability
- **Case Study: Deepwater Horizon Oil Spill**

Module 4: Sustainable Engineering and Environmental Ethics

- Principles of sustainable engineering
- Climate-conscious design and green technologies
- Circular economy and resource efficiency
- Environmental impact assessment practices
- ESG-driven engineering decision-making
- **Case Study: Renewable Energy Infrastructure Projects**

Module 5: Digital Ethics, Artificial Intelligence, and Emerging Technologies

- Ethical challenges in AI-enabled engineering systems
- Data privacy and cybersecurity responsibilities
- Autonomous systems and human oversight
- Responsible innovation frameworks
- Technology impact assessment
- **Case Study: Autonomous Vehicle Development**

Module 6: Professional Practice, Leadership, and Workplace Ethics

- Professional communication and collaboration
- Ethical leadership and decision ownership
- Workplace integrity and transparency
- Managing diversity and inclusion
- Building high-performance ethical teams

- **Case Study: Engineering Project Leadership Failures**

Module 7: Engineering Laws, Standards, and Global Compliance

- Engineering regulations and professional licensing requirements
- International engineering standards
- Intellectual property and innovation protection
- Contractual responsibilities and professional liability
- Compliance-driven engineering practices
- **Case Study: Large Infrastructure Project Compliance Challenges**

Module 8: Future of Engineering Ethics and Responsible Innovation

- Future trends shaping engineering professions
- Industry 5.0 and human-centered engineering
- Responsible innovation strategies
- Global engineering leadership
- Continuous professional development
- **Case Study: Smart Cities and Digital Infrastructure Development**

Training Methodology

This course employs a participatory and hands-on approach to ensure practical learning, including:

- Interactive lectures and presentations.
- Group discussions and brainstorming sessions.
- Hands-on exercises using real-world datasets.
- Role-playing and scenario-based simulations.
- Analysis of case studies to bridge theory and practice.
- Peer-to-peer learning and networking.
- Expert-led Q&A sessions.
- Continuous feedback and personalized guidance.

Register as a group from 3 participants for a Discount

Send us an email: info@fineskilltrainingcenter.org or call +254769199797

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- a. The participant must be conversant with English.
- b. Upon completion of training the participant will be issued with an Authorized Training Certificate
- c. Course duration is flexible and the contents can be modified to fit any number of days.

- d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- e. One-year post-training support Consultation and Coaching provided after the course.
- f. Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
21 Sep 2026	25 Sep 2026	Online	\$1,000
21 Sep 2026	25 Sep 2026	Physical	\$1,500
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
