

Knowledge Graphs for Libraries Training Course

Professional Development Training Course Outline

Category	Library Institute	Duration	5 Days
Base Fee	\$1,500 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

Knowledge Graphs for Libraries Training Course provides professionals with advanced knowledge and practical skills in designing, implementing, and managing knowledge graph technologies within modern library environments. The course explores semantic web technologies, linked data, metadata enrichment, artificial intelligence, machine learning, and digital transformation strategies that enhance information discovery, research visibility, and knowledge organization. With the rapid growth of digital libraries, open access resources, and interconnected information ecosystems, knowledge graphs have become essential tools for improving library services, resource interoperability, and user engagement.

This training course focuses on how libraries can leverage knowledge graphs to transform traditional cataloging systems into intelligent knowledge networks. Participants will learn how to apply RDF, ontologies, controlled vocabularies, entity linking, and data integration techniques to create connected digital collections. Through global case studies and practical applications, the course equips library professionals with innovative approaches for improving metadata quality, supporting research analytics, and building future-ready knowledge management systems.

Programme Curriculum

Knowledge Graphs for Libraries Training Course

Introduction

Knowledge Graphs for Libraries Training Course provides professionals with advanced knowledge and practical skills in designing, implementing, and managing knowledge graph technologies within modern library environments. The course explores semantic web technologies, linked data, metadata enrichment, artificial intelligence, machine learning, and digital transformation strategies that enhance information discovery, research visibility, and knowledge organization. With the rapid growth of digital libraries, open access resources, and interconnected information ecosystems, knowledge graphs have become essential tools for

improving library services, resource interoperability, and user engagement.

This training course focuses on how libraries can leverage knowledge graphs to transform traditional cataloging systems into intelligent knowledge networks. Participants will learn how to apply RDF, ontologies, controlled vocabularies, entity linking, and data integration techniques to create connected digital collections. Through global case studies and practical applications, the course equips library professionals with innovative approaches for improving metadata quality, supporting research analytics, and building future-ready knowledge management systems.

Course Objectives

By the end of this course, participants will be able to:

1. Understand the principles and applications of knowledge graphs in modern library systems.
2. Develop skills in semantic web technologies and linked data implementation.
3. Apply ontology design techniques for effective knowledge organization.
4. Implement metadata enrichment strategies using knowledge graph frameworks.
5. Utilize artificial intelligence and machine learning for library data integration.
6. Design interoperable digital library ecosystems using linked data standards.
7. Improve information retrieval through semantic search technologies.
8. Apply entity recognition and entity linking techniques in library collections.
9. Manage library resources using advanced knowledge management approaches.
10. Evaluate knowledge graph platforms and implementation models.
11. Develop strategies for digital transformation in academic and research libraries.
12. Apply global best practices in knowledge graph development.
13. Create sustainable knowledge graph solutions for future library innovation.

Organizational Benefits

1. Enhanced digital library transformation and knowledge management capabilities.
2. Improved discoverability and accessibility of library collections.
3. Increased interoperability between library systems and external databases.
4. Better metadata quality through automated enrichment processes.
5. Improved research support through intelligent information networks.
6. Stronger institutional visibility through linked data publishing.
7. Enhanced decision-making through data-driven library analytics.
8. Reduced information silos through integrated knowledge ecosystems.
9. Improved user experience through semantic search solutions.
10. Increased innovation capacity within library organizations.

Target Audiences

1. Academic librarians and university library professionals.
2. Digital library managers and administrators.
3. Information scientists and knowledge management specialists.
4. Metadata librarians and cataloging professionals.
5. Researchers in information technology and library science.

6. Data analysts working in information organizations.
7. Government and institutional knowledge managers.
8. IT professionals supporting library systems.

Course Duration: 5 days

Course Modules

Module 1: Introduction to Knowledge Graphs in Libraries

- Fundamentals and evolution of knowledge graphs in information management.
- Role of knowledge graphs in digital library transformation.
- Differences between traditional databases and knowledge graph systems.
- Key components including nodes, relationships, and semantic connections.
- Global case study: Knowledge graph initiatives at academic libraries worldwide.
- Applications of knowledge graphs in improving library discovery services.

Module 2: Semantic Web Technologies and Linked Data

- Principles of Semantic Web architecture for library applications.
- Understanding RDF, RDF Schema, and linked data standards.
- Creating interconnected library resources through semantic relationships.
- Applying Web Ontology Language (OWL) for knowledge representation.
- Global case study: Linked data projects by national libraries.
- Best practices for publishing library data on the semantic web.

Module 3: Ontology Development and Knowledge Representation

- Introduction to ontology concepts and library knowledge modeling.
- Designing domain-specific ontologies for information resources.
- Mapping existing library classifications into ontological structures.
- Managing controlled vocabularies and authority data.
- Global case study: Library of Congress linked data transformation.
- Strategies for maintaining sustainable ontology frameworks.

Module 4: Metadata Management and Data Enrichment

- Advanced metadata practices for knowledge graph development.
- Integrating MARC records with linked data environments.
- Improving metadata accuracy through automated enrichment.
- Applying entity recognition for resource enhancement.
- Global case study: European digital library metadata initiatives.
- Techniques for continuous metadata quality improvement.

Module 5: Artificial Intelligence and Knowledge Graph Applications

- Role of artificial intelligence in knowledge graph creation.
- Using machine learning for information extraction and classification.
- Automating entity linking and relationship discovery.
- Applying AI-driven recommendations in library services.
- Global case study: AI-powered academic research platforms.
- Future trends of AI-enabled knowledge ecosystems.

Module 6: Knowledge Graph Implementation Strategies

- Planning knowledge graph projects within library environments.
- Selecting appropriate knowledge graph platforms and tools.
- Managing data migration and system integration challenges.
- Developing governance frameworks for knowledge graph operations.
- Global case study: University libraries implementing semantic platforms.
- Measuring performance and impact of knowledge graph projects.

Module 7: Semantic Search and User Experience Enhancement

- Improving information retrieval through semantic technologies.
- Designing intelligent discovery interfaces for library users.
- Applying knowledge graphs for personalized recommendations.
- Enhancing research visibility through interconnected resources.
- Global case study: Digital repositories using semantic search.
- Future opportunities for user-centered knowledge graph services.

Module 8: Future Trends and Strategic Knowledge Management

- Emerging trends in knowledge graphs and digital libraries.
- Integrating knowledge graphs with big data and analytics.
- Developing institutional strategies for knowledge innovation.
- Managing security, privacy, and data governance challenges.
- Global case study: Smart libraries using advanced knowledge networks.
- Building future-ready library ecosystems through knowledge graphs.

Training Methodology

- Instructor-led interactive presentations covering knowledge graph concepts and applications.
- Practical demonstrations of semantic web tools and linked data platforms.
- Hands-on exercises involving metadata transformation and ontology development.

- Group discussions focusing on library technology challenges and solutions.
- Global case study analysis from leading digital libraries and research institutions.
- Problem-solving activities based on real-world knowledge management scenarios.
- Participant projects for designing knowledge graph implementation strategies.

Register as a group from 3 participants for a Discount

Send us an email: info@fineskilltrainingcenter.org or call +254769199797

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- The participant must be conversant with English.
- Upon completion of training the participant will be issued with an Authorized Training Certificate
- Course duration is flexible and the contents can be modified to fit any number of days.
- The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- One-year post-training support Consultation and Coaching provided after the course.
- Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
21 Sep 2026	25 Sep 2026	Online	\$1,000
21 Sep 2026	25 Sep 2026	Physical	\$1,500
21 Sep 2026	25 Sep 2026	Physical	\$0

Start Date	End Date	Location	Price
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
21 Sep 2026	25 Sep 2026	Physical	\$0
