## Course Introduction

Neural Networks in Design Analysis Training Course is designed to equip learners with advanced capabilities in deep learning, generative design, computational intelligence, and AI-driven engineering optimization. As industries rapidly shift toward AI-powered design automation, predictive modeling, and intelligent systems engineering, neural networks have become the backbone of modern innovation. Neural Networks in Design Analysis Training Course integrates convolutional neural networks, recurrent neural networks, transformers, and generative adversarial networks to revolutionize how design analysis is performed across architecture, product design, industrial engineering, and digital simulation environments.

With a strong focus on real-world applications, industry-aligned projects, and data-driven design intelligence, this training prepares professionals to harness machine learning pipelines, simulation-based optimization, and AI-enhanced visualization systems. Participants will gain hands-on experience in building and deploying neural network models for design pattern recognition, structural analysis, generative prototyping, and performance forecasting. The program is tailored to meet the demands of Industry 4.0, smart manufacturing, digital twin ecosystems, and AI-enhanced design automation workflows, making it a future-ready specialization for engineers, designers, and data scientists.

## Programme Curriculum

### Neural Networks in Design Analysis Training Course

#### Introduction

Neural Networks in Design Analysis Training Course is designed to equip learners with advanced capabilities in deep learning, generative design, computational intelligence, and AI-driven engineering optimization. As industries rapidly shift toward AI-powered design automation, predictive modeling, and intelligent systems

engineering, neural networks have become the backbone of modern innovation. Neural Networks in Design Analysis Training Course integrates convolutional neural networks, recurrent neural networks, transformers, and generative adversarial networks to revolutionize how design analysis is performed across architecture, product design, industrial engineering, and digital simulation environments.

With a strong focus on real-world applications, industry-aligned projects, and data-driven design intelligence, this training prepares professionals to harness machine learning pipelines, simulation-based optimization, and AI-enhanced visualization systems. Participants will gain hands-on experience in building and deploying neural network models for design pattern recognition, structural analysis, generative prototyping, and performance forecasting. The program is tailored to meet the demands of Industry 4.0, smart manufacturing, digital twin ecosystems, and AI-enhanced design automation workflows, making it a future-ready specialization for engineers, designers, and data scientists.

### **Course Duration**

10 days

### **Course Objectives**

1. Master deep learning architectures for design analysis
2. Apply convolutional neural networks for visual pattern recognition
3. Develop generative AI models for creative design automation
4. Implement predictive modeling for structural performance analysis
5. Optimize workflows using AI-driven simulation systems
6. Build intelligent design decision-support systems
7. Integrate machine learning into CAD and CAE environments
8. Use transformer models for complex design interpretation
9. Enhance parametric and generative design techniques
10. Apply reinforcement learning in adaptive design systems
11. Develop data-driven optimization pipelines for engineering
12. Utilize digital twin technology with neural networks
13. Deploy scalable AI models for real-time design analysis

### **Target Audience**

- Mechanical, civil, and industrial engineers
- Architects and computational designers
- Data scientists and AI engineers
- Product and UX/UI designers
- Manufacturing and production engineers
- Research and development professionals
- CAD/CAE software specialists
- Graduate students in AI, engineering, and design fields

### **Course Modules**

#### **Module 1: Foundations of Neural Networks in Design**

- Neural network basics and architecture types
- Role of AI in modern design systems
- Data structures for design analysis

- Activation functions and learning processes
- Introduction to design intelligence systems
- **Case Study:** AI-based architectural layout optimization in urban housing

## **Module 2: Machine Learning for Design Data Processing**

- Data preprocessing techniques for design datasets
- Feature extraction for engineering models
- Handling high-dimensional design data
- Training/testing dataset preparation
- Data normalization in design workflows
- **Case Study:** Manufacturing defect detection using ML pipelines

## **Module 3: Convolutional Neural Networks (CNNs) in Visual Design**

- Image recognition for design analysis
- CNN layers and filters in design interpretation
- Feature mapping for structural evaluation
- Pattern recognition in architectural designs
- Object detection in engineering visuals
- **Case Study:** Structural crack detection in bridges using CNNs

## **Module 4: Recurrent Neural Networks (RNNs) for Sequential Design Data**

- Time-series modeling in design processes
- RNN architecture and memory units
- Long-term dependency analysis
- Predictive modeling for system behavior
- Sequential simulation workflows
- **Case Study:** Predictive maintenance in smart manufacturing systems

## **Module 5: Generative Adversarial Networks (GANs) for Creative Design**

- GAN architecture fundamentals
- Generative design model training
- Synthetic design generation
- Style transfer in visual design
- Optimization of generated outputs
- **Case Study:** AI-generated furniture design prototypes

## **Module 6: Transformers in Advanced Design Interpretation**

- Attention mechanisms in design analysis
- Transformer architecture fundamentals
- Multi-modal design processing
- Context-aware design generation
- Large-scale model training
- **Case Study:** AI-assisted building layout generation

## **Module 7: Reinforcement Learning for Adaptive Design Systems**

- Reward-based learning systems

- Agent-environment interaction models
- Adaptive design optimization
- Simulation-driven learning processes
- Policy optimization techniques
- **Case Study:** Autonomous robotics design optimization

#### **Module 8: Parametric and Generative Design Systems**

- Parametric modeling fundamentals
- Rule-based design automation
- Constraint-based optimization
- Evolutionary design algorithms
- Generative design pipelines
- **Case Study:** Lightweight aerospace component design

#### **Module 9: Design Simulation and Digital Twins**

- Digital twin architecture
- Real-time simulation systems
- Predictive maintenance modeling
- AI integration in simulations
- Feedback loop optimization
- **Case Study:** Smart factory digital twin implementation

#### **Module 10: AI in Structural Engineering Analysis**

- Load prediction models
- Stress-strain analysis using AI
- Structural optimization systems
- Failure prediction modeling
- Material behavior prediction
- **Case Study:** Earthquake-resistant building design system

#### **Module 11: Computer Vision for Design Inspection**

- Image segmentation techniques
- Object detection in engineering assets
- Visual anomaly detection
- Automated inspection systems
- High-resolution image processing
- **Case Study:** Automated pipeline defect detection

#### **Module 12: AI-Driven Product Design Optimization**

- Product lifecycle modeling
- AI-based ergonomics analysis
- Consumer behavior integration
- Optimization algorithms
- Rapid prototyping systems
- **Case Study:** Smart wearable device optimization

#### **Module 13: Data Engineering for Design Intelligence**

- Data pipeline architecture
- Big data in design systems
- Cloud-based design analytics
- Data warehousing for engineering
- Real-time analytics integration
- **Case Study:** Smart city infrastructure planning system

#### **Module 14: Deployment of Neural Network Models**

- Model training and validation
- API integration for design tools
- Cloud deployment strategies
- Edge AI applications
- Model scaling techniques
- **Case Study:** AI-powered CAD tool deployment

#### **Module 15: Industry Applications & Capstone Project**

- End-to-end design AI workflow
- Industry use-case integration
- Model evaluation techniques
- Portfolio development
- Real-world project execution
- **Case Study:** Full-scale smart building design system

### **Training Methodology**

This course employs a participatory and hands-on approach to ensure practical learning, including:

- Interactive lectures and presentations.
- Group discussions and brainstorming sessions.
- Hands-on exercises using real-world datasets.
- Role-playing and scenario-based simulations.
- Analysis of case studies to bridge theory and practice.
- Peer-to-peer learning and networking.
- Expert-led Q&A sessions.
- Continuous feedback and personalized guidance.

#### **Register as a group from 3 participants for a Discount**

Send us an email: [info@fineskilltrainingcenter.org](mailto:info@fineskilltrainingcenter.org) or call +254769199797

#### **Certification**

*Upon successful completion of this training, participants will be issued with a globally- recognized certificate.*

#### **Tailor-Made Course**

*We also offer tailor-made courses based on your needs.*

#### **Key Notes**

- a. The participant must be conversant with English.

- b. Upon completion of training the participant will be issued with an Authorized Training Certificate
- c. Course duration is flexible and the contents can be modified to fit any number of days.
- d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- e. One-year post-training support Consultation and Coaching provided after the course.
- f. Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

## Upcoming Scheduled Sessions

| Start Date  | End Date    | Location | Price   |
|-------------|-------------|----------|---------|
| 21 Sep 2026 | 02 Oct 2026 | Online   | \$2,000 |
| 21 Sep 2026 | 02 Oct 2026 | Physical | \$3,000 |
| 21 Sep 2026 | 02 Oct 2026 | Physical | \$0     |
| 21 Sep 2026 | 02 Oct 2026 | Physical | \$0     |
| 21 Sep 2026 | 02 Oct 2026 | Physical | \$0     |
| 21 Sep 2026 | 02 Oct 2026 | Physical | \$0     |
| 21 Sep 2026 | 02 Oct 2026 | Physical | \$0     |
| 21 Sep 2026 | 02 Oct 2026 | Physical | \$0     |
