

Training Course on Climate Change Impact Assessment on Agricultural Production

Professional Development Training Course Outline

Category	Agriculture	Duration	10 Days
Base Fee	\$3,000 USD	Delivery Mode	Online / On-site Hybrid

Course Introduction

Climate change is rapidly altering the landscape of global agriculture. Rising temperatures, erratic rainfall patterns, extreme weather events, and shifting agro-ecological zones have introduced new risks and uncertainties into agricultural production systems. Training Course on Climate Change Impact Assessment on Agricultural Production a cutting-edge, science-based understanding of how climate change impacts crops, livestock, soil health, and water availability, while equipping participants with practical tools and methodologies for impact assessment. The program emphasizes data-driven climate modeling, remote sensing applications, and integrated approaches to climate-smart agriculture, tailored to both smallholder and commercial farming contexts.

Designed for professionals and stakeholders across the agricultural and environmental sectors, this course empowers participants to evaluate climate-induced risks, develop adaptive strategies, and support policy formulation. Through interactive modules, real-world case studies, and evidence-based tools, learners will gain the competencies needed to strengthen food security and resilience in agricultural value chains. By the end of the training, participants will be prepared to lead impactful assessments and design mitigation and adaptation strategies that align with sustainability goals and climate action priorities.

Programme Curriculum

Training Course on Climate Change Impact Assessment on Agricultural Production

Introduction

Climate change is rapidly altering the landscape of global agriculture. Rising temperatures, erratic rainfall patterns, extreme weather events, and shifting agro-ecological zones have introduced new risks and uncertainties into agricultural production systems. Training Course on Climate Change Impact Assessment on Agricultural Production a cutting-edge, science-based understanding of how climate change impacts crops, livestock, soil health, and water availability, while equipping participants with practical tools and methodologies for impact assessment. The program emphasizes data-driven

climate modeling, remote sensing applications, and integrated approaches to climate-smart agriculture, tailored to both smallholder and commercial farming contexts.

Designed for professionals and stakeholders across the agricultural and environmental sectors, this course empowers participants to evaluate climate-induced risks, develop adaptive strategies, and support policy formulation. Through interactive modules, real-world case studies, and evidence-based tools, learners will gain the competencies needed to strengthen food security and resilience in agricultural value chains. By the end of the training, participants will be prepared to lead impactful assessments and design mitigation and adaptation strategies that align with sustainability goals and climate action priorities.

Course Objectives

1. Understand the science of climate change and its effects on agroecosystems.
2. Analyze the impact of climate change on crop productivity using climate models.
3. Assess the vulnerability and exposure of agricultural systems to climatic risks.
4. Utilize geospatial tools and remote sensing for climate data collection and analysis.
5. Explore climate-smart agricultural practices for sustainable production.
6. Quantify greenhouse gas emissions from agriculture.
7. Develop climate risk assessments for specific crops and regions.
8. Understand livestock adaptation strategies under heat stress and drought.
9. Examine policy frameworks for climate-resilient agriculture.
10. Design early warning systems and climate forecasting models.
11. Integrate gender-sensitive and inclusive approaches in climate impact assessments.
12. Apply economic modeling to estimate climate change costs on farming systems.
13. Create community-based adaptation strategies for local farming resilience.

Target Audiences

1. Agricultural Extension Officers
2. Environmental Scientists
3. Agronomists and Crop Specialists
4. Climate Change Analysts
5. Government Policy Makers
6. NGO and Civil Society Workers
7. University Researchers and Students
8. Agricultural Technology Developers

Course Duration: 10 days

Course Modules

Module 1: Fundamentals of Climate Science

- Understanding greenhouse effect and global warming
- Climate variability vs climate change
- Key climate drivers affecting agriculture
- IPCC assessment reports and implications
- Tools for climate data analysis
- **Case Study: Historical climate trends in Sub-Saharan Africa**

Module 2: Climate Change and Crop Production

- Impacts on crop growth stages
- Yield reduction and quality implications
- Temperature and water stress effects

- Agroclimatic zone shifts
- Adaptation options for major crops
- **Case Study: Maize yield decline in Eastern Africa**

Module 3: Climate Change and Livestock Systems

- Heat stress and animal health
- Feed and water resource challenges
- Disease emergence due to warming
- Adaptive livestock management
- Breeding for climate resilience
- **Case Study: Drought impact on pastoral communities in Kenya**

Module 4: Soil Health and Climate Change

- Soil erosion and degradation
- Carbon sequestration in soils
- Changes in soil biodiversity
- Climate-resilient soil management
- Conservation agriculture practices
- **Case Study: Soil fertility decline in South Asia**

Module 5: Water Resources and Irrigation

- Changing precipitation patterns
- Impact on surface and groundwater
- Efficient irrigation technologies
- Water harvesting and storage
- Integrated water resource management
- **Case Study: Irrigation system failures in Morocco**

Module 6: Tools for Climate Risk Assessment

- Climate models and emission scenarios
- Data sources: NASA, NOAA, IPCC
- Vulnerability and exposure mapping
- Impact modeling for crops/livestock
- Software tools (DSSAT, AquaCrop)
- **Case Study: Flood risk mapping for rice in Bangladesh**

Module 7: Remote Sensing and GIS Applications

- Satellite-based climate monitoring
- NDVI and drought indices
- Mapping soil moisture and rainfall
- GIS for resource planning
- Use of drones in agriculture
- **Case Study: Remote sensing for crop insurance in India**

Module 8: Climate-Smart Agriculture (CSA)

- Three pillars of CSA
- Climate-resilient crop varieties
- Precision farming techniques
- Sustainable land management
- Agroforestry integration

- **Case Study: CSA adoption in Rwanda**

Module 9: Greenhouse Gas Emissions in Agriculture

- Sources of GHG in farming
- Emission quantification techniques
- Carbon footprint of food systems
- Mitigation options
- MRV (Measurement, Reporting, Verification)
- **Case Study: Methane reduction in rice paddies**

Module 10: Economic Impact and Cost Assessment

- Economic modeling for climate risk
- Farm-level cost-benefit analysis
- Insurance and risk-sharing mechanisms
- Financing climate adaptation
- Climate-resilient investment planning
- **Case Study: Economic losses from drought in Ethiopia**

Module 11: Gender and Social Inclusion

- Gender-differentiated climate impacts
- Empowering women farmers
- Inclusive decision-making processes
- Addressing indigenous knowledge
- Equity in adaptation programs
- **Case Study: Women-led resilience initiatives in Nepal**

Module 12: Policy and Institutional Frameworks

- National climate strategies and NDCs
- Agricultural policy integration
- Multilateral climate agreements (UNFCCC)
- Institutional capacity building
- Role of governance in adaptation
- **Case Study: Climate policy effectiveness in Malawi**

Module 13: Early Warning and Forecasting Systems

- Climate data and agrometeorological stations
- Weather forecasting tools
- Seasonal forecasts and decision tools
- Integrating local knowledge
- Communicating warnings to farmers
- **Case Study: Famine Early Warning System (FEWSNET)**

Module 14: Community-Based Adaptation Strategies

- Participatory vulnerability assessments
- Farmer-led planning and adaptation
- Climate-resilient livelihood diversification
- Traditional ecological knowledge
- Scaling local innovations
- **Case Study: Farmer field schools in Uganda**

Module 15: Future Innovations in Climate-Resilient Agriculture

- AI and machine learning in climate prediction
- CRISPR and gene editing for resilience
- IoT and smart sensors in agriculture
- Blockchain in supply chain traceability
- Emerging technologies in precision farming
- **Case Study: Big data analytics for farming in Brazil**

Training Methodology

- Interactive lectures with multimedia presentations
- Hands-on exercises using real climate datasets
- Group-based problem-solving workshops
- Simulation games and decision-making scenarios
- Field visits and practical demonstrations
- Expert panels and guest speakers

Register as a group from 3 participants for a Discount

Send us an email: info@fineskilltrainingcenter.org or call +254769199797

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

- The participant must be conversant with English.
- Upon completion of training the participant will be issued with an Authorized Training Certificate
- Course duration is flexible and the contents can be modified to fit any number of days.
- The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.
- One-year post-training support Consultation and Coaching provided after the course.
- Payment should be done at least a week before commence of the training, to Fineskill Training Center account, as indicated in the invoice so as to enable us prepare better for you.

Upcoming Scheduled Sessions

Start Date	End Date	Location	Price
21 Sep 2026	02 Oct 2026	Online	\$2,000
21 Sep 2026	02 Oct 2026	Physical	\$3,000

Start Date	End Date	Location	Price
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
21 Sep 2026	02 Oct 2026	Physical	\$0
